DISPLAY A STRING

Exp No: 10

Name : Anirudh H

Reg No: 185001019

Aim

To write a program to display a string in an 8086 microprocessor using MASM and DOSBox.

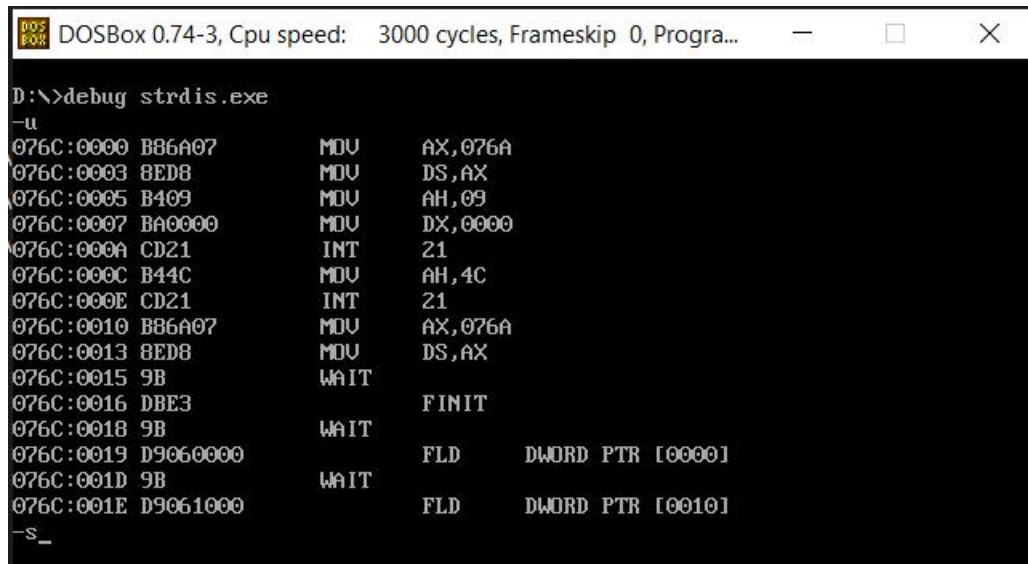

Algorithm

1. Define the string in the data segment and make sure to terminate with “\$”
2. Initialize the data segment register with a data segment address
3. Call the DOS Interrupt Function 21H with AH=9 after loading the effective address of the string message into DX
4. Terminate the program by calling the DOS Interrupt Function 21H with AH = 4CH

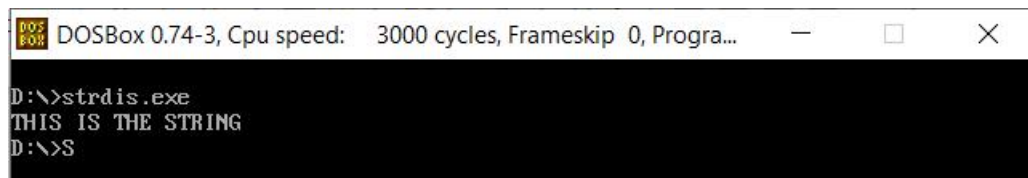

Program to display a string

Program	Comments
START: MOV AX,DATA MOV DS,AX	Initializing the data segment register with the data segment address
MOV AH,9 LEA DX, MESSAGE INT 21H	Calling the DOS Interrupt Function 21H with AH=9 after loading the effective address of the string message into DX
MOV Ah,4CH INT 21H CODE ENDS END START	Calling the DOS Interrupt Function 21H with AH = 4CH to terminate the program

Snapshot:

```

D:\>strdis.exe
THIS IS THE STRING
D:\>S
```

Result

Program for performing case conversion on the fly in an 8086 microprocessor using MASM and DOSBox was implemented and the output was verified.

DISPLAY SYSTEM DATE AND TIME

Exp No: 11

Name :Anirudh H

Reg No: 185001019

Aim

To write programs to display the system date and system time in an 8086 microprocessor using MASM and DOSBox.

Program to display the system date

Algorithm

1. Define the values in the data segment and assign the initial values if required
2. Initialize the data segment register with a data segment address
3. Call the DOS Interrupt Function 21H with AH=2AH to obtain the system date:
 - a. CX = year (1980-2099)
 - b. DH = month
 - c. DL = day
 - d. AL = day of week (00h=Sunday)
4. Display the date in the desired format by loading into the appropriate variables
5. Terminate the program

Program	Comments
start: mov ax,data mov ds,ax	Initializing the data segment register with the data segment address
mov ah,2ah int 21h	Call the DOS Interrupt Function 21H with AH=2AH to get the system date
mov si,offset day mov [si],dl mov si,offset month mov [si],dh mov si,offset year mov [si],cx	Load the result of the DOS function into the appropriate memory locations for display
mov ah,4ch int 21h code ends end start	Calling the DOS Function to enter the display screen using interrupt 21H and to terminate the program

Program to display the system time

Algorithm

1. Define the values in the data segment and assign the initial values if required
2. Initialize the data segment register with a data segment address
3. Call the DOS Interrupt Function 21H with AH=2CH to obtain the system time:
 - CH = hour
 - CL = minute
 - DH = second
4. Display the time in the desired format by loading into the appropriate variables
5. Terminate the program

Program	Comments
start: mov ax,data mov ds,ax	Initializing the data segment register with the data segment address
mov ah,2ch int 21h	Call the DOS Interrupt Function 21H with AH=2AH to get the system time
mov hour,ch mov minute,cl mov second,dh	Load the result of the DOS function into the appropriate memory locations for display
mov ah,4ch int 21h code ends end start	Calling the DOS Function to enter the display screen using interrupt 21H and to terminate the program
